## Existence and Uniqueness

Let  $X \in \mathbb{C}^{m,n}$ ,  $m \geq n$  Then

$$\left[ \begin{array}{c} X \end{array} \right] \left[ \begin{array}{c} v_1 | v_2 | \dots | v_n \end{array} \right] = \left[ \begin{array}{c} u_1 | u_2 | \dots | u_m \end{array} \right] \left[ \begin{array}{ccccc} \sigma_1 & & & & \\ & \sigma_2 & & & \\ & & \ddots & & \\ & & & & \sigma_n \\ & & & & 0 \end{array} \right]$$

or

$$X = U \Sigma V^T,$$

where  $U^T U = I$ , with columns of  $U$  called left singular vectors and  $V^T V = I$  with right singular vectors as columns of  $V$  and  $\Sigma = \text{diag}(\sigma_1, \dots, \sigma_n)$  called **singular values** ordered such that  $\sigma_1 \geq \sigma_2 \geq \dots \geq \sigma_n \geq 0$ .

## Theorem (The rank of a matrix)

*The rank of  $X$  is  $r$ , the number of nonzero singular values in*

$$X = U\Sigma V^T = U \begin{bmatrix} \sigma_1 & & & & & \\ & \sigma_2 & & & & \\ & & \ddots & & & \\ & & & \sigma_r & & \\ & & & & 0 & \cdots \\ & & & & 0 & \ddots \end{bmatrix} V^T.$$

## Theorem

For any  $\nu$  with  $0 \leq \nu \leq r$ , define

$$X_\nu = \sum_{j=1}^{\nu} \sigma_j u_j v_j^T,$$

Then

$$\|X - X_\nu\|_2 = \inf_{B \in \mathbb{C}^{m,n}, \text{rank}(B) \leq \nu} \|X - B\|_2 = \sigma_{\nu+1}.$$

Deblurring  
imagesMelina  
Freitag

Outline

Motivation

How images  
become  
numbersCompressing  
imagesThe image  
deblurring  
problemBlurring and  
Deblurring  
imagesThe blurring  
function  
DeblurringProof ( $m = n$ )

$$\begin{aligned}\|X - X_\nu\|_2 &= \left\| \sum_{j=\nu+1}^r \sigma_j u_j v_j^T \right\|_2 = \|U \begin{bmatrix} 0 & & & \\ & \sigma_{\nu+1} & & \\ & & \ddots & \\ & & & \sigma_n \end{bmatrix} V^T\|_2 \\ &= \sigma_{\nu+1}\end{aligned}$$

Remains to show that there is no closer rank  $\nu$  matrix to  $X$ .

# Low-rank approximations

become  
numbers

Compressing  
images

The image  
deblurring  
problem

Blurring and  
Deblurring  
images

The blurring  
function  
Deblurring

## Proof ( $m = n$ )

$$\begin{aligned}
 \|X - X_\nu\|_2 &= \left\| \sum_{j=\nu+1}^r \sigma_j u_j v_j^T \right\|_2 = \|U \begin{bmatrix} 0 & & & \\ & \sigma_{\nu+1} & & \\ & & \ddots & \\ & & & \sigma_n \end{bmatrix} V^T\|_2 \\
 &= \sigma_{\nu+1}
 \end{aligned}$$

Remains to show that there is no closer rank  $\nu$  matrix to  $X$ .

- Let  $B$  have rank  $\nu$ , **null space of  $(B)$**  has dimension  $n - \nu$
- $\{v_1, \dots, v_{\nu+1}\}$  has dimension  $\nu + 1$
- Let  $h$  be a unit vector in their intersection:

$$\begin{aligned}
 \|X - B\|^2 &\geq \|(X - B)h\|^2 = \|Xh\|^2 = \|U\Sigma V^T h\|^2 \\
 &= \|\Sigma(V^T h)\|^2 \geq \sigma_{\nu+1}^2 \|V^T h\|^2 \geq \sigma_{\nu+1}^2.
 \end{aligned}$$

## Boundary conditions

- Zero boundary conditions
- Periodic boundary conditions
- Reflexive boundary conditions

The matrix  $A$  which is obtained from  $P$  by convolution becomes

- Block Toeplitz matrix
- Block Circulant matrix
- Sum of Block Toeplitz and Block Hankel and Block Toeplitz plus Hankel matrices

## The SVD again

With

$$A = U\Sigma V^T = [u_1 | u_2 | \dots | u_N] \begin{bmatrix} \sigma_1 & & & \\ & \sigma_2 & & \\ & & \ddots & \\ & & & \sigma_N \end{bmatrix} \begin{bmatrix} v_1^T \\ \vdots \\ v_N^T \end{bmatrix}$$

we have

$$x_{\text{Naive}} = A^{-1}b = V\Sigma^{-1}U^Tb = \sum_{i=1}^N \frac{u_i^T b}{\sigma_i} v_i$$

$$X_{\text{Naive}} = \sum_{i=1}^N \frac{u_i^T b}{\sigma_i} V_i = \sum_{i=1}^N \frac{u_i^T b_{\text{exact}}}{\sigma_i} V_i + \sum_{i=1}^N \frac{\cancel{u_i^T b}}{\sigma_i} V_i$$

Deblurring

## Behaviour of singular values

- $\sigma_i \rightarrow 0$  as  $i$  grows
- the more “blurry” the function, the faster the decay rate
- $\text{cond}(A) = \sigma_1/\sigma_N$

- the more “blurry” the function, the faster the decay rate
- $\text{cond}(A) = \sigma_1/\sigma_N$

## The regularised solution

Introduce filter factors  $\Phi_i$

$$x_{\text{Naive}} = \sum_{i=1}^N \Phi_i \frac{u_i^T b}{\sigma_i} v_i$$

## TSVD

$$\Phi_i = \begin{cases} 1 & i = 1, \dots, k \\ 0 & i = k + 1, \dots, N \end{cases}$$

## Tikhonov regularisation

$$\Phi_i = \frac{\sigma_i^2}{\sigma_i^2 + \alpha^2}$$

where  $\alpha > 0$  is a regularisation parameter, This choice of filter factor yields solution to the minimisation problem

$$\min_x \{ \|b - Ax\|_2^2 + \alpha^2 \|x\|_2^2 \}.$$

## Regularised solution

$$\begin{aligned}x_{\text{filt}} &= V\Phi\Sigma^{-1}U^T b \\&= V\Phi\Sigma^{-1}U^T A x_{\text{exact}} + V\Phi\Sigma^{-1}U^T e \\&= V\Phi V^T x_{\text{exact}} + V\Phi\Sigma^{-1}U^T e\end{aligned}$$

$$x_{\text{exact}} - x_{\text{filt}} = \underbrace{(I - V\Phi V^T)x_{\text{exact}}}_{\text{Regularisation error}} - \underbrace{V\Phi\Sigma^{-1}U^T e}_{\text{Perturbation error}}$$

## Oversmoothing and undersmoothing

- small regularisation error, large perturbation error leads to **undersmoothed solution**
- large regularisation error, small perturbation error leads to **oversmoothed solution**
